

ECOJEKT

ASPIRATION NEEDLE WITH MODIFIED CHIBA POINT

The **ECOJEKT** is a needle with a modified Chiba type point (double sharpness).

This needle includes a removable stylet perfectly coupled to the needle.

Both the needle sliding stopper and the depth marks allow to safely control the penetration depth. The inner echogenic marker prevents the spreading of cancerous cells.

Clear luer hub with colour code.

The **ECOJEKT** is a universal needle. Its applications are: biopsies, aspirations, injections of contrast media, amniotic fluid sampling, alcoholizations, exploratory punctures, withdrawal of choroid villi, lumbar punctures.
